1 Step-by-step assembly instruction

1.1 Check inventory

Once you have all the pieces in front of you, the process of putting them together is no different from assembling pieces of Lego. First, double-check your inventory. Take your time and enjoy the building process!

1.2 Build the foundation

Start by laying down part A followed by all eight part Bs (roots).

1.3 Complete the foundation

Cap the top of the foundation with all part Cs.

→ Cardboard Tree

1.4 Add sides

Slide into place all four tree sides (part Ds) using at first the three disks (E, F and G) then slotting the tree into the foundation you built in the previous step.

1.5 Build and set the star

Glue the three parts of the star together using a part "I" in between two part Hs. This is the only point when you really need some glue. The rest of the parts fit together without glue or any other kind of fixture.

1.6 Perform some finishing touches

There is no need to apply any preservatives or paint; feel free to add some decoration. You can add some Christmas baubles by inserting a cord or twine around the tree giving you some extra space for decoration. **ENJOY!**
